

DESIGN REVIEW BOARD RECORD OF DECISION

Meeting Date January 11, 2018 **DRB Case No.** PDR1608723
Address 1000 Avonoak Terrace
Applicant A. Marcoosi Architects

PROPOSAL: The applicant is proposing to convert the existing attached, two-car garage into living space, adding 634 square feet to the existing 2,152 square-foot house (built in 1967), on a 9,300 square-foot lot in the RIR (Restricted Residential) Zone, Floor Area Ratio District I. A new two-car garage is to be constructed below the garage conversion. The existing swimming pool is to be demolished and the flat portion of the rear yard expanded with the addition of new retaining walls. The proposed design keeps the modern architectural style, and adds composite wood accents to the existing cement plaster exterior finish. On August 28, 2017, the project was approved with conditions through the City’s Administrative Design Review process. Two appeals to this approval were filed on September 13, 2017. Appeals of administrative design review cases are heard by the Design Review Board.

DRB Decision		Overturn the appeal and sustain the ADR’s approval with conditions.				

CONDITIONS:

1. Architect to work with staff to achieve a maximum top of roof elevation not to exceed 893.25’ with the exception of the chimney.
2. Submit a soil report and grading plan prepared by a civil engineer to ensure stability of the hillside.

3. Provide a roof drainage plan and show any exposed downspouts on building elevations.
4. Provide a solid panel garage door (as shown in the rendering) in place of the specified metal frame and translucent panel door for a more appropriate style compatible with the house and neighborhood.
5. Provide cut sheets for all building and site lighting fixtures. Use shielding on fixtures to orient light downwards.
6. Provide a vertical window section/detail for windows at front and side elevations.
7. Provide retaining wall/planters of a decorative material (to be approved by staff), such as split face block, and show retaining walls heights on all elevations.
8. Provide a landscaping plan indicating the backyard slopes replanted with drought tolerant and MWELo compliant landscaping to match or complement the new proposed landscaping; a tree species (at maturity) that shall not exceed the pad level of adjacent properties, so they are not out-of-scale with the height of the house; and adequate planting provided to screen maximum allowable heights of retaining walls visible from the street, (particularly as shown on Sheet-A-3.1-North Elevation).

ANALYSIS:

Site Planning: The proposed site planning is appropriate to the site and its surroundings, as modified by any conditions, for the following reasons:

- The new two-car garage is appropriately placed under the proposed garage conversion of the existing house.
- The majority of the existing building footprint will remain, with a four-foot extension added along the side of the garage conversion for access stairs to the new lower level garage.
- The driveway, previously up-sloping, will remain at the same location on the site, but will be down-sloping.
- The proposed landscaping appears complementary to the building design. A landscape plan will be provided for the rear yard showing slopes replanted with drought tolerant and Model Water Efficient Landscape Ordinance (MWELo) compliant landscaping to match or complement the new proposed landscaping; a tree species (at maturity) not to exceed the pad level of adjacent properties, so they are not out-of-scale with the height of the house; and adequate planting to screen retaining walls visible from the street (particularly as shown on Sheet-A-3.1 North Elevation).
- The new retaining walls terrace with the slope and the decorative material will be approved by staff.

Mass and Scale: The proposed mass and scale are appropriate to the site and its surroundings, as modified by any conditions, for the following reasons:

- The neighborhood is made up of a mixture of one and two-story structures. The proposed garage conversion with the addition below the existing structure is appropriate. Raising the existing roof over the new living, dining and family rooms by 2-feet to accommodate 10-foot ceiling heights, the existing roof/parapet height (above the
