

The Unwanted Items Guide

We all have things in our homes that we no longer love or need. They take up valuable space and can make our homes feel cluttered. But when thrown away, they likely end up in landfills, contributing to the planet's carbon footprint.

This spring, take a step towards sustainable living by giving your items a second life. No system is perfect, but every small action counts. It's best to have a thousand imperfect environmentalists trying to live sustainably than a few perfect ones.

While gathering all the items you no longer need, consider these options before resorting to the trash bin.

Buy Nothing Group

If you have gently used items or items that need sprucing up, try listing them on an online community called a Buy Nothing Group.

It is a community of neighbors giving away items for free. There are 7,000 Buy Nothing groups worldwide and two in the Glendale region. Depending on which area of Glendale you live in, you can join a Buy Nothing Group on Facebook and post about items you have (or want). If someone in your neighborhood wants it, they can pick it up! The group heavily centers around community and proof that one person's unwanted items are another's treasure.

I started using a Buy Nothing Group last year. So far, I have given away lemons from our tree, nine childhood toys, a laptop cover I no longer used, candles, and an array of clothes. I have also borrowed power tools from neighbors.

It's a great forum to "give" and "ask" for items that otherwise would've been thrown out! Any and all items can be found in these groups. So, don't shy away from posting about the most peculiar items.

Thrift Stores

However, if you do not wish to participate in Buy Nothing Groups, then consider donating to thrift stores! Thrift Stores accept an array of items, not just clothes. Glendale has multiple thrift stores which include:

AL Thrift Shop on 314 E Harvard St, Goodwill on 1600 E Colorado St. Goodwill on 240 N Brand Blvd. Goodwill on 1622 W Glenoaks Blvd. Goodwill on 6343 San Fernando Rd.

The following is a full list of accepted items at Goodwill:

Artwork, Frames, Glassware

Jewelry, Lamps, Holiday Decoration

Bedspreads, Blankets, Linens, Fabric

Cookware, Dish-ware, Utensils,

CDs, DVDs, Records, Audio and VHS tapes

Books and crafts

Sporting Goods, Sleeping Bags

Electronics, computers, printers

Furniture

Bicycles, wheeled toys

To donate, it's best to neatly pack your items in a bag or box and take it directly to the center to drop them off with an attendant.

Appliance Repair: Fix-It clinic

A fix-it clinic is a troubleshooting and discovery workshop where a volunteer coach guides attendees through repairs. While repairing is not guaranteed, this is a great way to learn a new skill and exhaust every last effort before buying a new appliance.

The City is planning to hold a fix-it clinic workshop on May 20. To participate, bring a broken item and any parts and tools you already own that might be helpful.

Options like a Buy Nothing Group, thrift stores, and fix-it clinics give unwanted items a second life. There are a small step towards the road to sustainability. Therefore, it's important to consider them before discarding items.

Interesting Read

FROM EX-OFFICIO MEMBER, MIKE BORISOV

Happy Spring, everybody! As we enter the warmer months, I think it is important to note just how lucky we are to have such great weather in Los Angeles, particularly for walking. I want to note that Glendale, and Los Angeles at large, has an opportunity to become a great 15-minute walkable city. Recent city projects and plans have propelled the city forward, in terms of, sustainability, but there is still much work to be done.

Something I personally advocate for is adding bike lanes, bus-rapid transit, up-zoning, and creating transit-oriented development. These policy choices are a great way to create an urban environment where car dependence isn't critical, community development is more prominent, and greater accessibility is at the heart of plans. Cities like Melbourne, Copenhagen, Singapore, Vienna, Frankfurt, Tokyo, Paris, and Barcelona are just some cities propelling such initiatives with great success.

The goal of 15-minute cities is to reduce pollution, increase efficiency, and increase the standard of living.
Cities will still have urban sprawl, but the city center and local regions can improve how residents get to where they want and social cohesion.
Glendale may not be there yet, but we have one of the best shots at it in Los Angeles County.

So next time you're at a city council meeting, meeting with your representative, or stumble into a community event, don't be scared to start a conversation on the benefits of creating a more walkable city.

What's in our staffs' bags?

Elizabeth carries reusables to account for all possibilities - water bottle, cutlery, to-go container, a bag, and period products. One of her favorite essentials is reusing a small to-go container for leftovers after eating in a restaurant. By already having a to-go container in her bag, Elizabeth does not have to get a new one and reduces her food waste.

Another essential that people might not know too much about is reusable period products. Disposable plastic products can take 800 years to degrade. Often, they end up in the ocean or landfills. On the other hand, reusable products, such as menstrual cups and pads, can be used for ten years while eliminating the monthly waste generated. You can also use your FSA and HSA to purchase menstrual products- including reusable menstrual products. Some insurance providers cover the cost of reusable menstrual products. Call your insurance plan provider for more details on eligibility.

Fork, knife, and straw

Chopsticks

Boba straw

Nora carries metal utensils in an old pencil case. She's a big fan of boba and always has a bamboo boba straw on her. Using reusables doesn't mean giving up your favorite treats!

David carries a reusable water bottle and Tupperware. His favorite water bottle joined him on many adventures providing a source of water and fond memories.

Landfills are a major methane emitters, a greenhouse gas more potent than carbon dioxide. By reusing products, we can significantly reduce our environmental impact, promote sustainable practices, and protect our ecosystems.

Recycling 101

Reducing and reusing are powerful tools in addressing the waste crisis. Despite efforts to commit to these practices, plastic waste remains prevalent due to its deep cultural integration. Still, recycling is an opportunity to reuse materials for new products – provided the item is recyclable.

Which begs the question, what can and cannot be recycled in Glendale specifically?

Aluminum is one of the most easily recyclable products. It includes aluminum cans, food packaging, frozen dinner trays, and sheets of foil. If cleaned, they can all be disposed of in blue curbside recycling bins or dropped off at recycling centers in Glendale.

Similarly, all types of paper, including cardboard packaging, books, notebooks, and loose paper, can be placed in your blue recycling bin.

A few notable exclusions:

Shredded paper is not accepted in curbside recycling bins and must be dropped off at the recycling center.

The Plastic Problem:

Recycling plastic poses more challenges compared to other materials. However, clear and colored plastic bottles and liquid containers, such as plastic water bottles, are accepted and recycled.

The photo below shows recyclable items in Glendale's facilities. You can also visit Integrated Waste's webpage to see a list of accepted items.

While recycling facilities accept some plastic materials, other plastic materials cannot be recycled and are sent to landfill. Examples of non-recyclable plastic items include black and clear food containers and dark-colored pill bottles, shown in the photo below. These will ultimately end up in landfills.

The most common items that the center receives but redirects to landfill are plastic bags and pouches (from drinks). Generally, if it can be crinkled or poked through, it cannot be recycled, and it must be thrown away. Shipping packaging, plastic film, and polystyrene packaging are all non-recyclable.

The future of plastic recycling:

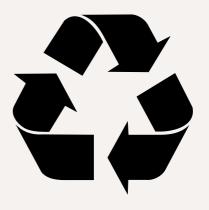

Trash is easy to deal with. You put it in a bin; it seems to no longer exists.

Unfortunately, there is no universal recycling system. Not all facilities can process every type of recycled material. However, new California legislation is set to change the recycling industry.

In October 2021, Governor Gavin
Newsom signed a cluster of bills known
as the Circular Economy Package. They
focus on reducing single-use plastics
and minimizing their export overseas.
The package includes several bills that
aim to educate consumers and
encourage the use of recyclable
materials.

Senate Bill 343, titled "Truth in Labeling for Recyclable Materials," is an important bill in the package. It was inspired by Senator Ben Allen's experience of realizing that the plastic sleeve his newspaper arrived in, which had the three arrow recycling symbol, wasn't being recycled.

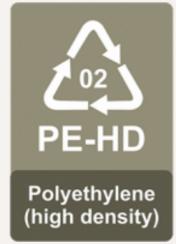

The bill focuses on redefining the resin identification code, or RIC. It is commonly called "the recycling symbol." In truth, just because an item has the three arrow symbol, it does not mean it's recyclable.

Senate Bill 343 aims to change the system to be less confusing for consumers. Essentially, it prevents consumers from being misled by the resin identification code. The average consumer associates the three allow symbols on an item with it being recyclable. In practice, only plastics labeled 1 or 2, such as water bottles, soda bottles, and milk jugs, are regularly recycled. The other resin codes are infrequently recycled.

Therefore, Senate Bill 343 requires plastic products and packaging that bear the recycling symbol to meet certain criteria before being labeled and considered as "recyclable."

The Circular Economy Package represents a significant effort to reduce the use of single-use plastics and promote recycling in California.

The bill package aims to educate consumers, close loopholes in waste management, and encourage new forms of material production. These bills are a step in the right direction toward a more sustainable future.

But again, recycling is a last resort; reducing and reusing come first.

Organics Recycling:

The City of Glendale started an organics recycling program for all of its residences and businesses. Organic waste is any items from a living organism or items that you eat. It includes food waste, paper towels, tissues, pizza boxes, egg shells, meat, cheese, and even bones.

To recycle your organics, place them in a clear plastic bag, then add them to the green yard bin.

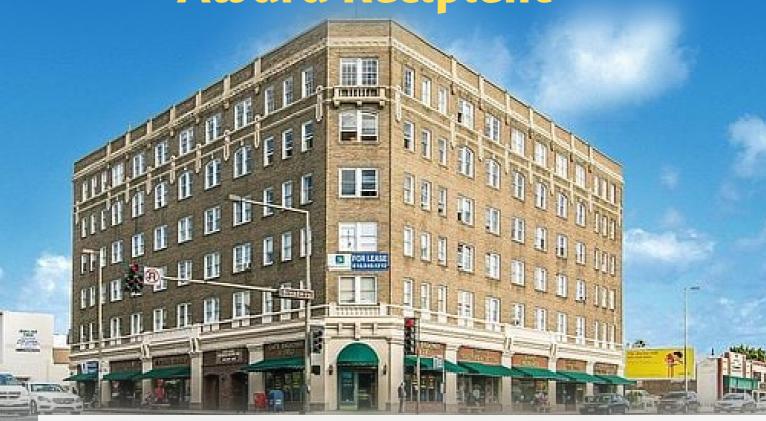

I don't have a Green bin or a blue bin:

If you live in a Single Family Home or a Small Multi-Family Property (2-4 units) but do not have a trash bin, you can request one from the City Website.

If you live in a Multi-family home, (5+ units) you can request a bin from your franchise hauler, which you can find here.

Sustainability Stewardship Award Recipient

Glendale Flats is the recipient of the March Sustainable Stewardship Award. The building first opened in 1925. It is Glendale's most iconic residential building and the only residential apartment complex in Glendale on the National Register of Historic Buildings. Its manager is committed to moving Glendale's Historic Landmark into future best practices. The building has had solar panels since the mid-eighties. Rainwater is collected and used for outdoor watering and cleaning. Organics recycling green bins are available and used by the tenants in increasing numbers. The goal of the building is to make participation in sustainable practice effortless so that more tenants can take part in climate-resilient action.

If you wish to honor an individual, organization, or business with the Sustainability Stewardship Award, <u>click here.</u>

What is Earth Day?

Earth Day started in 1970 in response to environmental degradation and pollution concerns. Since then, it has grown into a global movement with various activities and events promoting environmental protection and sustainability. Its significance stems from demonstrating widespread support for protecting the planet and its natural resources - crucial in the face of the climate crisis. In the past, Earth Day significantly impacted national policy, and it continues to show that environmental protection is a priority for people worldwide.

This year, the Glendale Library
Arts & Culture received a State
Sustainability Library Grant to
fund the Earth Month & Beyond
project in partnership with the
City of Glendale's Office of
Sustainability. Therefore, along
with the annual Earth Day Fair,
there are various additional
sustainability-focused programs
throughout April and May.

These programs include a Fix-It clinic, monthly clothing repair workshops, "Glendale Carbon Conversations" speaker events with the Rahus Institute, and a Guided Nature Hike with Glendale Community Services and Parks. The Library will also support the Office of Sustainability's Earth Day Fair with workshops, talks, and activities for all ages.

The planned Earth Day events and activities are on the following pages, along with corresponding sign-up links

You can also sign up to volunteer for the fair here.

SATURDAY, APRIL 22, 2023 11:00 AM to 3:00 PM

Pacific Park, 501 S Pacific Ave, Glendale, CA 91205

A unique fair with something for all ages!

Join us for family-fun activities, sustainable local vendors, music, and interactive workshops. Come and learn more about local initiatives and how to get involved in climate change action.

For more information and fair schedule, visit glendaleca.gov/EarthDayFair

For questions, email Sustainability@glendaleca.gov or call (818) 548-4844.

This project was supported in whole or in part by the U.S. Institute of Museum and Library Services under the provisions of the Library Services and Technology Act, administered in California by the State Librarian.

Free environmentally focused community lectures and workshops from leading experts and local changemakers.

Fostering the Next Climate Activists

Thursday, April 20, 2023 from 6:00 PM to 8:00 PM - Doors open at 5:30 PM Glendale Central Library

How do we empower future generations to be climate action agents? Join us for an evening presentation by Mary DeMocker, author of The Parents' Guide to Climate Revolution: 100 Ways to Build a Fossil-Free Future, Raise Empowered Kids, and Still Get a Good Night's Sleep, and a panel of student and youth climate activists on fostering the next generation of sustainability minded change makers.

Shaping the Energy Future of Glendale

Thursday, April 27, 2023 from 6:00 PM to 8:00 PM - Doors open at 5:30 PM **Glendale Central Library**

What could Glendale's green energy future look like? Joins us for an evening presentation on how to revolutionize and build resilience in our energy and power systems in Glendale by Ted Flanigan, energy expert, founder of EcoMotion, and host of Flanigan's Eco-Logic Podcast, followed by a panel of energy experts and community leaders.
