Power Control Systems User Agreement

Power Control Systems (“PCS”) are an emerging technology that enables inverters/energy storage systems to limit current and loading on the busbars and conductors supplied by the power production sources, allowing for different power limiting operating modes and the ability to set a power export limit in some cases.

Glendale Water & Power (“GWP”) will allow contractors to install Power Control Systems in GWP service territory. GWP will also allow PCS functionality in its PV Interconnection Application process in PowerClerk, under the following conditions, and violation of any of these conditions will result in revocation of the Interconnection Agreement between the Customer-Generator and GWP, and the Customer-Generator will no longer be able to benefit from Net Energy Metering (“NEM”).

1. Customer-Generator and/or contractor agrees to notify GWP of any intent to change or alter the PCS kW output under any and all circumstances.
2. Customer-Generator and/or contractor also agrees that changes to the kW output of any installed PCS requires a new PV Interconnection Application to be submitted to GWP via PowerClerk and must be approved by GWP, City of Glendale Building & Safety Department, and in some instances GWP Engineering Department.
3. Customer-Generator and/or contractor recognize that certain PCS manufacturers lock the ability for the end user to change the kW output of the installed PCS automatically or manually and understand that under these circumstances proof of a written request from the Customer-Generator and/or contractor to the manufacturer must be included along with the new PV Interconnection Application.
4. Customer understands that only PCS which are password protected may be installed, and changes may be made only by qualified personnel once the new PV Interconnection Application is approved by GWP. This requirement is pursuant to NEC 730.50.
